

Assistance to Low-Carbon Innovation at TIIAME National Research University

TIIAME National Research University (TIIAME) is committed to driving **low-carbon innovation** through its **research, education, and collaborations** that promote the development and implementation of **clean energy solutions** and **sustainable technologies**. The university actively supports efforts to reduce carbon emissions by focusing on **energy-efficient technologies** and **renewable energy sources**, positioning itself as a leader in the **low-carbon innovation** landscape in Uzbekistan and beyond.

1. Low-Carbon Research and Development

TIIAME plays a critical role in advancing **low-carbon technologies** through its academic and research initiatives. The university conducts extensive research in **renewable energy, energy efficiency, and resource-efficient technologies**, with an emphasis on **green energy solutions** for agriculture and irrigation. TIIAME's focus is on reducing carbon emissions in these sectors, which are among the largest consumers of energy.

- **Example of Research:** TIIAME's researchers are working on **solar-powered irrigation systems** and **wind energy solutions** for rural areas. These innovations significantly reduce the carbon footprint of agricultural operations, promoting **sustainable farming practices** and **low-carbon energy use**.
- **Related Decree:** According to **Presidential Decree PQ-42** of 2021, TIIAME is mandated to foster **low-carbon innovation** by focusing on **renewable energy sources** and **resource-efficient technologies**. The decree supports TIIAME's efforts to drive innovation in **green energy** and ensure the **transition to low-carbon solutions** in agriculture and water management.
 - **Link to Decree:** [Presidential Decree PQ-42](#)

2. Low-Carbon Innovation in Education

TIIAME provides **education and training** for students and professionals in low-carbon technologies. The university's programs emphasize the importance of **green energy solutions, carbon reduction strategies, and energy-efficient technologies**. TIIAME offers both **mandatory and elective courses** focused on **renewable energy systems, smart agriculture, and energy-efficient infrastructure**, all of which promote the transition to a low-carbon economy.

- **Example of Educational Programs:**
 - The **Smart Agriculture and Water Management Training Site** established at TIIAME is designed to equip students with practical knowledge in implementing **low-carbon agricultural practices** using **renewable energy** and **energy-efficient technologies**. This site is part of the **TIIAME educational and experimental farm**, which is recognized as a model for integrating **clean energy solutions** in agriculture.
 - **Link to the Decree for Education Focus:** [Smart Agriculture and Water Management](#)

3. Assistance to Low-Carbon Innovation in Industry

TIIAME's collaboration with local and national industries helps accelerate the adoption of **low-carbon technologies**. The university works closely with industry partners to implement **clean energy** and **energy-efficient solutions**, especially in **irrigation systems** and **agricultural practices**.

- **Partnership with Industry:** TIIAME collaborates with various **energy companies** and **government agencies** to conduct joint research and pilot projects. These projects focus on **low-carbon innovations** in sectors like **water management** and **irrigation**, where the

university's expertise in **renewable energy technologies** helps reduce the carbon footprint of local industries.

- **Example of Industry Assistance:** TIAME has assisted **Uzbekistan's Ministry of Energy** in developing policies that promote the adoption of **solar-powered irrigation systems** for rural communities, which has been a significant part of Uzbekistan's strategy to reduce carbon emissions in agriculture.

4. International Collaboration and Global Impact

TIAME actively participates in **international collaborations** and **partnerships** that focus on **low-carbon innovation** and **sustainable energy solutions**. Through its work with global organizations such as **IRENA**, **UNDP**, and **the World Bank**, TIAME contributes to the **global low-carbon transition**.

- **Global Collaboration:** TIAME's participation in international forums, such as the **International Renewable Energy Agency (IRENA)**, allows the university to share **research findings** and **technological innovations** related to **low-carbon energy solutions**. These collaborations provide a platform for TIAME to showcase its **low-carbon innovation** initiatives and gain global recognition for its contributions to the **energy transition**.
- **Example of Global Cooperation:** TIAME's involvement in **IRENA's Global Renewable Energy Education Network** and the **UNDP's Energy Efficiency Program** allows the university to exchange knowledge on **low-carbon policies** and **technologies**, which in turn informs national and regional energy strategies.

5. Supporting National Policy Development

TIAME plays a key role in **advising** the **Uzbek government** on **energy policy** and **low-carbon strategies**. Through research, expert consultations, and policy recommendations, the university helps shape Uzbekistan's energy policies, ensuring they align with global best practices in **clean energy** and **carbon reduction**.

- **National Energy Policy Support:** TIAME experts have contributed to the development of Uzbekistan's **National Energy Strategy**, which prioritizes the **integration of renewable energy sources** and **carbon reduction technologies**. This aligns with the government's **long-term goals** to achieve a **low-carbon economy**.
- **Example of National Contribution:** TIAME's research and policy recommendations were instrumental in the development of Uzbekistan's **National Clean Energy Strategy** (2022), which aims to increase the share of **renewable energy** in the country's energy mix.

Support for Start-Ups Promoting a Low-Carbon Economy at TIAME

TIAME Support for Green Energy Start-Ups: Competition and Innovation

TIAME National Research University (TIQXMMI) is deeply committed to fostering **green energy innovation** and supporting the transition to a **low-carbon economy**. To promote **sustainable development** and encourage student-led entrepreneurship in the field of **green energy**, TIAME has launched a **competition for start-up projects** aimed at developing **innovative solutions** in **renewable energy** and **energy efficiency**.

Competition Overview:

TIAME's start-up competition is designed to **financially support** and **accelerate the development** of **green energy projects** by students. With a total funding pool of **200 million soums**, this competition provides an opportunity for students to turn their **innovative ideas** into **viable, sustainable businesses**.

- **Focus on Green Energy:** The competition is specifically geared towards projects that contribute to **green energy** solutions, including **solar energy**, **wind energy**, **energy-efficient technologies**, and other **low-carbon innovations**.
- **Encouraging Sustainable Solutions:** Students are encouraged to submit projects that address the **global energy transition**, reduce **carbon emissions**, and offer **sustainable alternatives** to conventional energy sources.

How TIAME Supports Green Energy Start-Ups:

1. **Financial Backing**
TIAME offers **financial assistance** to the most promising start-up projects in the field of **green energy**. The competition's total funding of **200 million soums** is aimed at helping students cover the initial costs of prototype development, market research, and product implementation for their green energy solutions.
2. **Innovation and Research Support**
Beyond financial backing, TIAME provides access to its **state-of-the-art research facilities**, where students can work on **cutting-edge technologies** related to **clean energy**. The university also offers **mentorship** from faculty members who are experts in **renewable energy** and **sustainability**, helping students refine their ideas and bring them to life.
3. **Encouraging Student Entrepreneurship**
TIAME fosters a **culture of entrepreneurship** by offering **training programs** and **workshops** on **business development**, **market strategies**, and **fundraising for green energy projects**. These resources ensure that students are not only equipped with the technical knowledge to create innovative solutions but also the skills to transform these ideas into successful start-ups.
4. **Public Engagement and Transparency**
The results of the **preliminary examination** for the competition are publicly accessible, allowing stakeholders to see which projects are advancing to the next stage. This transparency demonstrates TIAME's commitment to open collaboration and accountability in supporting **green energy innovation**.

Startup projects of “TIAME” NRU for green energy

HETA- mini electro track

TIAME National Research University’s Contribution to Low-Carbon Innovation: The HETA Mini Electro Track

TIAME National Research University (TIAME) is committed to **low-carbon innovation** and promoting **clean energy technologies** in line with **SDG 7: Affordable and Clean Energy**. As part of its commitment to sustainability, TIAME has developed the **HETA Mini Electro Track**, an innovative electric vehicle designed to significantly **reduce carbon emissions** and promote **sustainable transportation**. This initiative is a key example of how the university is actively contributing to **low-carbon innovation** in Uzbekistan and globally.

1. Low-Carbon Innovation and Electric Mobility

The **HETA Mini Electro Track** is an electric vehicle developed by TIAME to address the growing need for **clean transportation solutions**. The vehicle operates using an **electric powertrain**, which substantially reduces or eliminates the **direct emissions** of **greenhouse gases** such as **carbon dioxide (CO₂)** and other pollutants typically produced by conventional vehicles powered by internal combustion engines.

- **Electric Powertrain:** By utilizing an electric motor and **batteries**, the HETA mini electro track significantly reduces the vehicle's carbon footprint, helping to reduce the reliance on **fossil fuels** and **non-renewable energy sources**.
- **Positive Environmental Impact:** When charged with **renewable energy** sources such as **solar** or **wind power**, the vehicle further enhances its **environmental benefits** by minimizing greenhouse gas emissions throughout its lifecycle. This aligns with **global efforts** to shift away from fossil fuel dependency and transition to **clean energy systems**.
- **Link to Video:** For more information about the HETA mini electro track, see the video on its development and impact: [HETA Mini Electro Track](#)

2. Financial Support for Green Innovation

In addition to developing and promoting the **HETA Mini Electro Track**, TIAME actively provides **financial support** to projects focused on **low-carbon technologies** and **green energy solutions**. The university offers up to **\$3,000 USD** in funding for projects that align with its mission of promoting **sustainability** and **clean energy**.

- **Example of Financial Support:** The funding is designed to assist students, researchers, and startups in bringing their **green energy projects** to life, whether it involves developing new **electric vehicles**, **energy-efficient technologies**, or **sustainable infrastructure**.

- **Encouraging Innovation:** By offering this financial support, TIIAME fosters an environment of **innovation**, encouraging young scientists and entrepreneurs to pursue their **green energy initiatives** and contribute to the **low-carbon transition**.

3. Contribution to Reducing Carbon Emissions

The development of the **HETA Mini Electro Track** aligns with TIIAME's broader goals of contributing to **carbon reduction** and addressing **climate change**. The vehicle's design promotes **sustainable transportation**, which is crucial in reducing emissions from the **transport sector**, one of the largest contributors to global carbon emissions.

- **Reducing Carbon Footprint:** The transition to **electric vehicles (EVs)** like the HETA mini electro track is vital for achieving a **low-carbon economy**. As EVs rely on **electricity** instead of fossil fuels, they offer a promising solution to **reduce greenhouse gas emissions** and **pollution** in the transportation sector.
- **Potential for Broader Impact:** The environmental impact of electric vehicles is closely tied to the sources of **electricity generation**. By using renewable energy for **charging electric vehicles**, the benefits of EVs can be maximized, making the **HETA mini electro track** a key component of Uzbekistan's efforts to transition to **cleaner energy** and **sustainable transportation** systems.

4. Supporting National and Global Energy Transitions

TIIAME's work on the **HETA Mini Electro Track** aligns with both **national** and **global** goals for **sustainable development**. The project contributes to the **global transition to renewable energy** and supports **Uzbekistan's** efforts to **reduce carbon emissions** and move towards a **low-carbon future**.

- **National Energy Strategy Support:** The HETA mini electro track project supports Uzbekistan's **National Energy Strategy**, which emphasizes the development of **clean energy** solutions, including the promotion of **electric vehicles** and the **integration of renewable energy** into the national grid.
- **Global Impact:** The **HETA mini electro track** is an example of how **universities** can contribute to **global efforts** to mitigate climate change by **developing and promoting innovative technologies** that reduce carbon emissions and promote **clean energy solutions**.

5. Public Availability and Transparency

TIIAME ensures that all related information, including **research findings**, **development processes**, and **financial support initiatives**, is made publicly available. The university actively shares details about its **low-carbon innovation projects** through:

- **TIIAME Website:** Official documents and updates on the HETA project and other **green energy innovations** are available to the public.
- **Public Presentations:** TIIAME regularly organizes events and seminars where **students**, **researchers**, and **industry professionals** present their work on **clean energy solutions**, fostering a **public dialogue** on the future of **low-carbon technologies**.

The **HETA Mini Electro Track**, developed by **TIIAME National Research University**, is a prime example of how **universities** can contribute to **low-carbon innovation** and **sustainable development**. Through its commitment to **clean energy technologies**, **financial support for green innovation**, and collaboration with **local, national, and global** partners, TIIAME is playing a vital role in promoting **low-carbon transportation** and helping to achieve the **global energy transition**. The financial backing provided by TIIAME encourages the development of additional

green energy projects, ensuring that the university's **innovations** continue to contribute to a **sustainable, low-carbon future**.

Defuse-IT intellectual water purification device with solar panel

Defuse-IT: Sustainable Water Purification with Solar Power

Defuse-IT, developed by **TIIAME National Research University**, is an innovative **water purification device** that integrates **solar energy** for enhanced sustainability. This device uses advanced purification technologies to ensure clean, safe water while reducing reliance on non-renewable energy sources.

Key features of **Defuse-IT** include:

1. **Water Purification System:** Removes contaminants, pathogens, and impurities to provide safe water for various uses.
2. **Solar Panel:** Powers the purification process by converting sunlight into electricity, reducing dependence on grid energy.
3. **Energy Storage:** Stores excess solar energy for use during low sunlight periods, ensuring continuous operation.
4. **Intelligent Control System:** Optimizes the purification process based on water quality and flow rate, ensuring efficiency.
5. **Monitoring and Maintenance:** Includes sensors to track water quality and system performance for reliable operation.

Financial Support for Innovation: TIIAME offers **\$2,000 USD** in **financial support** for projects like **Defuse-IT** to assist in further development and implementation. This funding helps support the transition to sustainable, low-carbon technologies in water purification.

By combining **solar power** with **water purification**, **Defuse-IT** offers a **sustainable solution** that reduces environmental impact and reliance on conventional energy sources, contributing to **clean water provision** and **carbon emissions reduction**.

For further details on specifications and performance, please refer to **TIIAME's official documentation** or contact the relevant department.

Mini vertical wind generator

Vertical-Axis Wind Turbines: A Sustainable Solution with TIIAME's Financial Support

Vertical-axis wind turbines (VAWTs) are a type of wind turbine where the main rotor shaft is oriented vertically, allowing the blades to rotate around a central vertical axis. Unlike traditional horizontal-axis wind turbines (HAWTs), which need to be aligned with the wind direction, VAWTs can capture wind from any direction, making them more versatile in areas with turbulent or variable wind conditions.

Advantages of Vertical-Axis Wind Turbines:

1. **Omnidirectional Wind Capture:**

VAWTs are capable of harnessing wind from all directions, which eliminates the need for a yaw mechanism and allows them to function effectively in areas with fluctuating wind patterns.

2. **Lower Noise Levels:**

The vertical rotor orientation can reduce the noise produced by VAWTs compared to HAWTs. This makes them more suitable for use in residential, urban, or noise-sensitive environments.

3. **Ease of Maintenance:**

The simpler design of VAWTs, with components located closer to the ground, makes them easier to maintain and repair, reducing operational downtime and maintenance costs.

4. **Scalability:**

VAWTs can be built in various sizes, from small-scale models suitable for decentralized energy generation or off-grid applications to larger models for commercial use.

TIIAME's Financial Support:

TIIAME National Research University offers **financial support of \$1,500 USD** for the development and implementation of **vertical-axis wind turbine projects**. This funding encourages innovation in **renewable energy** and provides financial backing to researchers and startups working to improve or deploy VAWT technology.

- **Example of Support:** The \$1,500 USD can be used for **prototype development, materials, or research** aimed at improving VAWT design or scaling the technology for practical use in urban or rural environments.

By supporting projects like **VAWTs**, TIIAME is helping contribute to the growth of **clean energy technologies** and promoting **sustainable development** in Uzbekistan and beyond.

For more information about the financial support and application process, please refer to **TIIAME's official website** or contact the relevant department.
